Project Design Phase-I
Solution Architecture

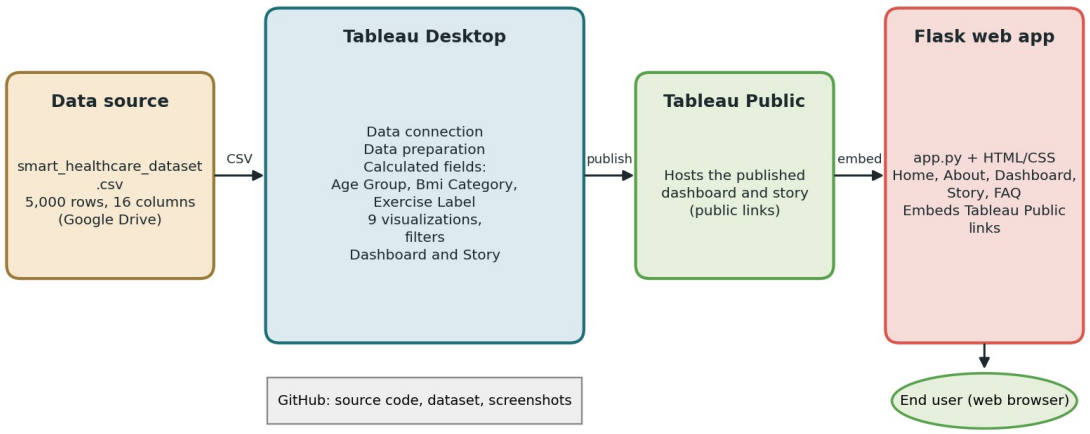

Date	01 November 2026
Team ID	
Project Name	Health360: Comprehensive Healthcare Risk & Disease Analysis
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram for Health360:

Component Description Table

Component Name	Description / Role in Architecture	Technology Used
Data source	Smart healthcare dataset with 5,000 patient records and 16 columns, stored on Google Drive.	CSV file
Data connection	Loads the CSV into Tableau Desktop without truncation.	Tableau Desktop (text file connection)
Data preparation	Checks missing values and duplicates and creates Age Group, Bmi Category and Exercise Label.	Tableau calculated fields
Visualization layer	Nine visualizations: KPI cards, bar, grouped bar, donut, pie, heat map and stacked bar charts.	Tableau Desktop
Dashboard and story	Combines the charts with filters and presents the findings scene by scene.	Tableau dashboard and story
Publishing	Hosts the dashboard and story and provides public links.	Tableau Public
Web application	Serves the Home, About, Dashboard, Story and FAQ page and embeds the Tableau Public links.	Flask, HTML, CSS
Version control	Stores code, dataset and screenshots.	Git and GitHub
