Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a Clinical Risk Assessment Officer (Dr. Michael Carter)	identify high-risk patients at an early stage	reviewing patient records by hand makes disease patterns hard to detect	thousands of records and many health indicators (BMI, blood pressure, cholesterol, glucose) sit in separate columns	worried that late detection leads to severe complications
PS-2	a Healthcare Data Analyst (Emily Rodriguez)	understand how smoking, alcohol and exercise relate to chronic disease	comparing lifestyle habits and disease across patient groups manually is slow and unclear	there is no single view that shows habits and disease side by side	frustrated and unsure about the conclusions
PS-3	a Public Health Researcher (Dr. Priya Nair)	find which demographic and behavioural factors drive chronic illness in the population	age, BMI and symptom patterns are hard to see in raw data	the data has not been turned into visual summaries by age group, BMI and exercise level	overwhelmed, and unable to plan preventive programs with confidence
