Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	01 November 2026
Team ID	
Project Name	Health360: Comprehensive Healthcare Risk & Disease Analysis
Maximum Marks	4 Marks

Functional Requirements:
Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	Priority (High/Medium/Low)
1	Data Access & Integration	Connect the 5,000-record smart healthcare CSV (16 columns) to Tableau Desktop without truncating any rows.	High
2	Data Processing	Check for missing values and duplicates; create calculated fields for Age Group, Bmi Category and Exercise Label.	High
3	Business Analysis	Calculate patient counts, disease counts, average blood pressure by age group, and heart disease rate by BMI category and exercise level.	High
4	Business Insights & Analytical Outputs	Provide 9 visualizations, one dashboard and one data story with scenes for each chart.	High
5	User Interaction & Analysis	Let users filter by Age Group, BMI Category and Exercise Level and compare segments across all charts.	High
6	Data Update & Reporting	Publish the dashboard and story to Tableau Public and embed them in a Flask web page; refresh by republishing the workbook.	Medium

Non-functional Requirements:
Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	Clear layout, readable labels, consistent colours and

		simple filters so users can explore without training.
NFR-2	**Security**	The dataset contains no names or contact details. Tableau Public workbooks are public, so only de-identified data should be published.
NFR-3	**Reliability**	All 5,000 records load into Tableau without truncation, and the KPI card (5,000 patients) confirms completeness.
NFR-4	**Performance**	The dashboard loads quickly with a small CSV, a fixed layout and a limited number of calculated fields.
NFR-5	**Availability**	Dashboard and story are available anytime through Tableau Public links and the Flask page.
NFR-6	**Scalability**	The same design can be reused for larger datasets by moving the data from CSV to a database or data extract.
