SMARTBRIDGE
Let's Bridge the Gap

Project Initialization and Planning Phase

Date	01 November 2026
Team ID	
Project Title	Health360: Comprehensive Healthcare Risk & Disease Analysis
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	Build a Tableau dashboard and data story that show which patients are at risk of heart disease, diabetes and stroke, and how age, BMI and lifestyle relate to disease.
Scope	5,000 patient records (16 columns). Analysis of demographics, lifestyle habits, vitals and disease flags; 9 visualizations, one dashboard, one story, published to Tableau Public and embedded in a Flask web page. No predictive modelling.
Problem Statement	
Description	Chronic diseases are often found late, and reviewing patient records by hand hides patterns across age, BMI and lifestyle.
Impact	Faster, clearer identification of high-risk groups supports early screening, better preventive care and better use of healthcare resources.
Proposed Solution	
Approach	Connect the CSV to Tableau, prepare the data with calculated fields, build 9 visualizations, combine them in a dashboard with filters, tell the findings in a story, publish to Tableau Public and embed in Flask.
Key Features	KPI cards, filters for Age Group, BMI Category and Exercise Level, heat map of BMI and exercise vs heart disease rate, scene-by-scene data story, and a web page for sharing.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard Windows laptop; no GPU needed
Memory	RAM specifications	16 GB RAM
Storage	Disk space for data, models, and logs	Under 1 GB (the dataset is a small CSV file)
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	Flask (Python); pandas used for data checks
Development Environment	IDE, version control	Tableau Desktop, Tableau Public, Git and GitHub, web browser
Data		
Data	Source, size, format	Smart healthcare dataset, CSV format, 5,000 rows, 16 columns
